

PARTNERSHIP OUTREACH PACKAGE

SYNTHEGY

Hospital, Government Health Service & CRO Partnership Programme

Target: De-identified patient data for Rheumatoid Arthritis and Asthma cohorts. In exchange: Synthegy platform access + co-authored publications + data sharing agreement template included.

Target Organisations

UK Hospitals with Rheumatology Departments

Organisation	Department	Why	Contact Approach
Guy's Hospital, London	Rheumatology	Large RA biologic registry	Via NIHR BioResource
Royal London Hospital	Rheumatology	Diverse cohort, Barts NHS Trust	Via Barts CRF
Manchester University NHS FT	Rheumatology	NRAS partnership, biologics clinic	Via NIHR Manchester BRC
Oxford University Hospitals	Rheumatology	NDORMS collaboration	Via Oxford BRC
Leeds Teaching Hospitals	Rheumatology	Large early-RA cohort	Via NIHR Leeds BRC

UK Hospitals with Respiratory/Asthma Departments

Organisation	Department	Why	Contact Approach
Royal Brompton Hospital	Respiratory	Largest severe asthma centre in UK	Via RBFT research office
Glenfield Hospital, Leicester	Respiratory	Severe asthma biologics clinic	Via Leicester BRC
Guy's Hospital, London	Respiratory	Asthma biologics, large cohort	Via KCL clinical trials
Queen Elizabeth, Birmingham	Respiratory	Diverse asthma cohort	Via Birmingham BRC

CROs (Contract Research Organisations)

Organisation	Speciality	Why	Contact Approach
IQVIA	Late-phase, real-world evidence	Largest RWE dataset globally	Via partnerships@iqvia.com
Parexel	Clinical trial management	RA + asthma trial experience	Via innovation@parexel.com
ICON plc	Real-world evidence	Disease registry expertise	Via partnerships@iconplc.com
Syneos Health	Biopharmaceutical solutions	RA biologic trial history	Via collaborations@syneoshealth.com

Government Health Services

Organisation	Data Available	Why	Contact Approach
NHS Digital	Hospital Episode Statistics	De-identified RA/asthma admissions	Via DARS (Data Access Request Service)
NIHR BioResource	Genomic + clinical data	RA patient genomic profiles	Via bioresource@nihr.ac.uk
UK Biobank	500K participants, linked	ERR + asthma sub-cohorts	Via ukbiobank access application
Genomics England	100K Genomes Project	RA/asthma genomic variants	Via GeCIP application

Outreach Email Templates

Template 1: Hospital / NHS Trust

Subject: Partnership enquiry -- AI-powered clinical intelligence platform for RA/Asthma cohorts

Dear Professor [Name],

I am writing to explore a data partnership between [Hospital/Trust] and SyntheGy, a bench-to-bedside AI platform that connects 12 public databases (PubChem, ChEMBL, ORD, openFDA, WHO) through a single reasoning layer.

We have built a clinical cohort layer with 300 synthetic patients across 6 diseases (including RA and asthma) with a 50-year epidemiological basis, outcome prediction models, and CDISC SDTM regulatory export. The platform is designed to swap synthetic data for real de-identified patient data via a CSV import -- the entire analysis pipeline stays identical.

We are seeking a partnership to:

1. Replace our synthetic RA/asthma cohorts with de-identified data from your registry
2. Co-author a publication on AI-assisted treatment response prediction
3. Provide your clinicians with free platform access for 12 months

All data sharing would be governed by a Data Sharing Agreement (template attached). No patient-identifiable data is required -- fully anonymised records only.

Live platform: preview-chat-6cbbdd64-b04b-40df-a2f3-12616b64fcbf.space-z.ai
GitHub: github.com/testdemoqwenai2025-creator/syntheGy

I would welcome a 30-minute conversation at your convenience.

Contact: syntheGy.acquisition@gmail.com

Template 2: CRO

Subject: Technology partnership -- SyntheGy AI platform for clinical trial optimisation

Dear [Name],

I am writing to propose a technology partnership between [CRO] and SyntheGy, a bench-to-bedside AI platform that connects 12 public databases through a single LLM reasoning layer, with clinical cohort analysis, outcome prediction, and CDISC SDTM regulatory export.

We believe SyntheGy can add value to [CRO]'s RA and asthma programmes by:

1. Predicting treatment response before patient enrolment (biomarker-based model)
2. Generating CDISC SDTM-compatible exports from raw patient data
3. Identifying compound-disease matches for drug repurposing
4. Providing literature confidence scoring for clinical trial protocols

We are seeking a pilot engagement: 3 months, 1 therapeutic area (RA or asthma), with option to extend. In exchange, [CRO] would provide de-identified patient data for model validation under a Data Sharing Agreement.

Live platform: preview-chat-6cbbdd64-b04b-40df-a2f3-12616b64fcdf.space-z.ai

Template 3: Government Health Service (NHS Digital / UK Biobank)

Subject: Data access application enquiry -- Synthehy AI platform for RA/Asthma research

Dear [Data Access Team],

I am writing to enquire about data access for a research project using the Synthehy platform -- a bench-to-bedside AI intelligence system that connects 12 public databases (PubChem, ChEMBL, ORD, openFDA, WHO) with clinical patient data through an LLM reasoning layer.

We are seeking access to de-identified RA and/or asthma patient records to:

1. Validate our outcome prediction model (currently trained on 300 synthetic patients)
2. Build a real-world evidence pipeline for treatment response prediction
3. Publish open-access results benefiting the NHS research community

No patient-identifiable data is required. All processing would comply with UK GDPR, the Data Protection Act 2018, and the NHS Digital Data Security Standard. We hold (or will obtain before data access) ISO 27001 certification and NHS Data Security and Protection Toolkit compliance.

We are happy to complete a full Data Access Request (DAR) or UK Biobank application.

Contact: synthehy.acquisition@gmail.com

Data Sharing Agreement -- Key Terms Template

This is a summary of key terms for a Data Sharing Agreement (DSA) between Syntheigy and a data-providing organisation. A full DSA should be drafted by a qualified data protection solicitor.

Clause	Key Terms
1. Data Type	Fully anonymised, de-identified patient records. NO identifiable data. NO special category data under UK
2. Data Scope	Disease: RA and/or asthma. Fields: diagnosis year, age at onset, sex, biomarkers, treatment history, outco
3. Purpose	Model validation and improvement of treatment response prediction. Co-authored publication. No commercial
4. Retention	Data retained for 3 years from receipt, then permanently deleted. Anonymised aggregate statistics may be
5. Security	Data stored in UK-based, ISO 27001-certified infrastructure. Encrypted at rest (AES-256) and in transit (
6. Compliance	UK GDPR, Data Protection Act 2018, NHS Data Security and Protection Toolkit, Caldicott Principles.
7. IP	Syntheigy retains IP in the platform, models, and algorithms. Data provider retains IP in the raw data. Co
8. Termination	Either party may terminate with 30 days notice. On termination, all data returned or destroyed within 7 d
9. Audit	Data provider may audit Syntheigy's data handling once per year with 14 days notice.
10. Publication	Both parties must approve publications before submission. No patient-identifiable information in any publ

IMPORTANT: This template is for guidance only. Engage a qualified data protection solicitor before signing any DSA. The Information Commissioner's Office (ICO) provides guidance at ico.org.uk. For NHS data, also consult the NHS Digital Data Access Request Service (DARS).
